## PROFESSIONAL SUMMARY

Full-stack developer who builds and ships production systems across the stack, from Python (FastAPI) and Node.js / TypeScript backends to React front ends. I care about how systems behave under real conditions: concurrency, retries, recovery, and clean API design. Comfortable in team-based, sprint-driven work and shipping to deadlines.

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, TypeScript, PHP, SQL, HTML, CSS

**Backend:** FastAPI, Node.js, Express, Slim 4

**Frontend:** React, Vite

**Data & ORM:** PostgreSQL, MySQL, SQLite, Redis, Prisma, SQLAlchemy, Alembic

**Tools & Platforms:** Docker, Git, Linux, Nginx, PM2, AWS EC2, Vercel

## WORK EXPERIENCE

### Backend Developer Intern – HNG Tech

Apr 2026 – Jun 2026

- Built production systems in Python (FastAPI), Node.js, TypeScript, and PHP, covering auth, queues, caching, retries, and crash recovery.
- Defended architecture and design decisions in mentor-led engineering reviews.

### Backend Developer – ArchSaint Nexus

Dec 2025 – Mar 2026

- Built and scaled backend systems with Node.js, Express, and TypeScript in a collaborative team.
- Designed and optimized database schemas and queries with Prisma ORM on PostgreSQL, improving data reliability and query performance.
- Contributed to [MyOrderFellow](#), a SaaS order-tracking platform for e-commerce businesses, building the PHP backend.

## PROJECTS

### Nebula

2026

*React 19 · Express 5 · Socket.IO · WebRTC · Prisma · PostgreSQL*

- Real-time team workspace built end to end: direct and channel messaging, a Kanban-style board with click-to-advance status, video huddles with screen sharing, and a notification feed.
- Socket.IO for live messaging, presence, and WebRTC call signaling; JWT auth with a refresh token in an httpOnly cookie; a shared TypeScript package keeping the API and UI types in sync. [Live](#) · [Code](#)

### Flaretag

2026

*FastAPI · async SQLAlchemy · PostgreSQL · Redis · Alembic*

- Contributed across the backend of a social badge platform: auth and JWT, database models and migrations, API routers, and tests.
- Async FastAPI service with Redis-backed rate limiting, strict typing, and a CI/CD pipeline. [Live](#) · [Code](#)

### Job Scheduler

2026

*Node.js · TypeScript · Postgres · Redis · React · AWS EC2*

- Background job scheduler built from scratch: a hand-built priority queue feeds independent worker processes that claim jobs atomically, so the same job never runs twice.
- Retries with backoff and jitter, a dead-letter queue, DAG job dependencies, and live updates over SSE. Deployed by hand with Nginx, HTTPS, and PM2. [Live](#) · [Code](#)

### Insighta Labs+

2026

*PHP 8.2 · Slim 4 · SQLite · Redis · JWT · Docker*

- One backend serving both a CLI and a web portal, authenticating each in the way it can keep safe: PKCE for the CLI, HTTP-only cookies for the web.
- Role-based access, rotating hashed refresh tokens, Redis caching, and streaming CSV ingestion up to 500k rows. [Code](#)

## EDUCATION

---

**B.Eng. Electrical / Electronics Engineering – University of Uyo**

2024 – Present

## CERTIFICATIONS

---

- Frontend Web Development – Udemy (HTML, CSS, JavaScript)
- JavaScript – Jonas Schmedtmann (Udemy)
- Mastering PHP for Absolute Beginners – Udemy
- Design Thinking from a Business Perspective – UNICEF Nigeria / FUCAP (May 2025)
- Introduction to Blockchain Technology – Yoma (May 2025)
